Ms. Susan Loudermilk
Assistant Chief Engineer
Department of Public Works
City of Indianapolis
2460 City/County Building
Indianapolis, IN 46204

Dear Ms. Loudermilk:

Enclosed is our Task 1 report entitled "Industrial Survey." The report summarizes the findings of our survey of more than 1000 industries in the City of Indianapolis and includes as appendices an up-to-date list of the industries currently using the City wastewater treatment system, their names and addresses, industry category, SIC code, process discharge, and total discharge data. The report is organized as follows:

- Executive Summary;
- Background and Study Objectives;
- Approach; and
- Findings.

The industrial user data base will form the basis for the data management system, the conceptual design of which is being developed by Peat Marwick under Task 1.11. As we have shown on our project schedule, Task 1.11 was started in January 1982 and will be coordinated with the development of the pretreatment program master plan which will be submitted on October 1, 1982.

This report includes all data which has been submitted to the City as of June 30, 1982. Additional information that may come in from outlying communities or from industries within the City of Indianapolis would be incorporated into the final report scheduled for submission to the City in late August for delivery to the State on September 1, 1982.

2

It has been a pleasure working with you on this study and we would like to extend our sincere thanks to Mr. Dale Bertelson and the staff of the Industrial Surveillance Branch for assisting in the telephone follow-up task and general coordination of the questionnaire. If you have any questions regarding this report, please contact Larry J. Scully or Deems Buell at (202) 223-9525.

Very truly yours,

PEAT, MARWICK, MITCHELL & CO.

EXECUTIVE SUMMARY

The pretreatment study is being conducted to assist the City of Indianapolis in gaining control over industrial sewer use. This requires a complete understanding of the industries in the area and their wastewater discharge. An industrial survey was conducted to develop this basic information and update the City's existing understanding of industrial users.

The survey consisted of a mailout questionnaire (Appendix A) to approximately 1,000 industries. The questionnaire was developed through extensive interaction with the City staff and a series of review meetings with the Technical Advisory Committee of the Chamber of Commerce. These review efforts were time-consuming, but resulted in a high-quality survey with an exceptional response rate of 93 percent.

The industries surveyed were identified from existing City industrial lists and a variety of industrial directories. All of the industries that were identified did not receive a questionnaire.

The industries were screened to identify those with a real potential for discharging nondomestic type wastes. The screening effort resulted in a list of 1,000 industries (from 2,000 industries) for the summary (See Appendix B).

The initial response rate to the survey was 65 percent. The ultimate response rate of 93 percent was obtained through extensive follow-up by Peat Marwick, Mark Battle and Industrial Surveillance staff. Additional questionnaires, received from slower responding industries, will be incorporated in the final Task 1 report, which will be submitted in August.

The results of the survey indicate that approximately 700 of the responding industries are connected to the Indianapolis sewer system. Of these, 250 contribute process wastewater to the system. The total wastewater flow contributed by the 700 industries is 27.5 million gallons per day, which indicates the significance of the major industrial users with respect to the entire sewerage systems.

Many of the industries surveyed would be regulated by federal categorical pretreatment standards, provided that these standards are promulgated. It does appear at this time that a limited number of these standards will be promulgated and Appendix D presents summary listings by category to assist the City in identifying industries in relation to their appropriate category. (The Task 2 report discusses in detail the City and industry requirements when standards for each of these categories are promulgated.)

EXECUTIVE SUMMARY

As the survey results were compiled, it became apparent through cursory review that the majority of the industries that are currently under permit have been correctly identified as significant dischargers. The survey does indicate, however, that a limited number of permitted industries may be less significant than some industries that discharge without a permit. We have been working closely with Industrial Surveillance to identify these dischargers so that appropriate permit modifications can be initiated. Further review of the survey results, indicates that there are a number of industries that may not require a permit at this time but require periodic review to determine if a change in status is warranted.

I. BACKGROUND AND STUDY OBJECTIVES

Industrial discharges to the municipal wastewater treatment plants need to be controlled to:

- minimize the priority pollutants that are discharged into the river;
- protect the wastewater treatment plant from upsets or poor operation;
- minimize the amount of toxic pollutants in the sludge;
- reduce the level of toxic pollutants in the combined sewer overflows;
- minimize sewer destruction; and
- improve sewer maintenance and safety.

The City of Indianapolis Pretreatment Program has been in place for a number of years and is currently being expanded and updated to improve control of industrial discharges and to comply with federal and state regulations.¹

A basic part of that improved system is an updated list of industrial dischargers and this report summarizes the results of an industrial survey conducted to obtain this information. The City is specifically interested in knowing the name, the address, the major products, the manufacturing process used, and the wastewater flow and pollutant characteristics of each industry.

The survey was designed to build upon existing City records and previous industry user lists which were made available by the Industrial Surveillance Branch.

¹ See U.S. Environmental Protection Agency Code of Federal Regulations Sections 403.8 and the Stream Pollution Control Board of the State of Indiana "Proposed Pretreatment Program Description" and Attachment A - Special Conditions.

The objectives of the survey were to:

- identify all significant industrial discharges to the City of Indianapolis sewerage system;
- provide the City with a basis for classifying industries by SIC code, size, flow, and waste stream characteristics for future decisionmaking;
- provide the City with an updated list to improve communications with industry and to provide a system for notifying industry of changes in the program;
- determine the types of industry that are in the Indianapolis area and the types of wastes that are being discharged; and
- provide the City with a basis for locating specific industries in the City sewer system and identifying the types of pollutants that might flow into each of the City's municipal treatment plants.

To achieve the study objectives, the study team followed the steps outlined in the approach Section of the report, which follows. These steps parallel the original Task 1 Plan of Study. The results of the survey, updated user lists, are presented in the four attached appendices.

II. APPROACH

1.1: DEFINE SURVEY OBJECTIVES

Prior to initiating the industrial waste survey, it was essential to define objectives that would direct the overall effort. Several meetings were held with City personnel to determine (1) basic data needs, (2) coordination activities with other City offices, (3) techniques for collecting and compiling data, and (4) the criteria for including industries in the survey.

Basic data needs were established by reviewing the City's existing data on industrial discharges in comparison with the City's data requirements for an effective pretreatment program. The City's data consisted of comprehensive information on approximately 180 large industrial users that discharge to the sewer under permit. The City's information needs are directed by the need to have more comprehensive information on other industries in the area and federal and state requirements which include preparation for implementing categorical pretreatment standards.

Preliminary meetings concerning the survey were used to identify other City offices which maintain information useful to the survey. Although various offices were identified and contacted, the most useful proved to be the Billing Department for Sewer Use, which maintains comprehensive lists of industrial, commercial, and residential accounts through the Indianapolis Water Company.

It was determined that the most practical method for collecting data is the mail-out questionnaire with responses compiled on a computerized data base. Various options were reviewed for maintaining the data base in light of the need for coordinating with the waste characterization task.

The basic criteria for including industries in the survey focused on an industry's potential quantity and quality of discharge and the industry's size and location. The major sensitivity during these discussions was requesting information from relatively insignificant industries.

1.2: DRAFT SURVEY APPROACH

A draft survey approach was developed based on the objectives established during preliminary meetings with the City. Our approach consisted of two major elements: (1) developing a questionnaire and (2) defining data management procedures.

The draft questionnaire was developed with the assistance of EPA's model questionnaire and a review of questionnaires that were used by other cities in developing their pretreatment programs. The background material on other city programs was collected by Mark Battle and Associates.

Three important factors were considered in defining data management procedures:

- conducting the survey efficiently;
- coordinating with the waste characterization; and
- leaving the data in a useful form for the City.

It was recognized that the survey population could range from 800 to 1500 industries making manual data compilation impractical. Therefore, all data management options under consideration were computerized.

The waste characterization depends heavily on the survey results so a mechanism was required to transfer survey data collected by Peat Marwick to JMM. As a result, it was decided that JMM's computer would be used for both efforts utilizing Digital Equipment Corporation's "Datatrieve" software package for file management.

The final factor in developing data management procedures was the need to leave the data in a useful form for the City. This included having the data in machine readable form at the conclusion of the survey and the approach described above accomplished this objective. Further, discussions were held with a computer expert from ICFAR to review our approach and general agreement was reached that our approach would leave the data in a readily transferable form.

Our preliminary draft questionnaire and definition of data management procedures were reviewed with City personnel to assure that the proper approach was being taken. Reviews of the questionnaire were conducted with industrial representatives to refine the approach further, and this effort is discussed in the following section.

1.3: INDUSTRY REVIEW OF THE SURVEY APPROACH

An important consideration in conducting a survey of industry was providing an opportunity for industry representatives to review and provide input on our approach. This was accomplished through a series of review meetings with the Technical Advisory Committee (TAC) of the Indianapolis Chamber of Commerce. During these meetings our approach was reviewed, including line-by-line analysis of the questionnaire.

As the meetings evolved, the questionnaire was revised to reach a mutually acceptable questionnaire for the survey. The final survey information including the questionnaire is contained in Appendix A.

A full presentation of our approach was presented to the industrial community and the public during a Public Meeting prior to the questionnaire mail-out. The major outcomes of this meeting were greater awareness of the survey and its importance to the pretreatment program and minor revisions to the final questionnaire.

1.4 and 1.5: DEVELOP THE MAILING LIST

A comprehensive industrial mailing list was developed to identify all potential industrial discharges for the survey. Industrial information was collected from various City sources and a number of independent listings of industries. The actual development of the mailing list was conducted by Mark Battle and Associates.

The primary sources of industrial information that were checked and cross-checked in preparing a comprehensive list were:

- . industrial lists from Industrial Surveillance;
- . industrial lists from the Billing Department;
- . water use records from the Indianapolis Water Company;
- . Dun and Bradstreet's Market Identifier Service;
- . the Harris Industrial Directory;
- . Mac Rae's Industrial Directory;
- . Chamber of Commerce industrial listings; and
- . the Indianapolis Telephone Directory.

Our technique for compiling one master list from these sources of information was to begin with the Industrial Surveillance lists and cross-check individual records with all other sources to develop individual index cards for each industry. This effort proceeded until all industries had been identified and recorded on index cards.

The index card information was then entered into the JMM computer data base. To facilitate this effort, the Dun and Bradstreet information was purchased in computer tape form and entered into the computer as an initial data base. Supplemental information from the index cards was then used to edit and expand the data base. This list contained approximately 2400 industries with the following information stored on each industry:

- company name;
- facility address;
- mailing address;
- employment;
- line of business;
- up to six SIC codes; and
- water use information, where available.

In reviewing the list of 2400 industries, it was apparent that a number of industries were relatively insignificant for the industrial survey. A procedure was developed to narrow the list to the most significant industrial users required to complete the survey. A flow chart, describing the procedure, is presented in Figure 1.

As a result of the procedure, the mailing list for Indianapolis and separate mailing lists for Beech Grove, Lawrence, and Greenwood, included all industries permitted by Industrial Surveillance, all potentially regulated¹ industries with employment greater than 9, all potentially nonregulated

¹ Potentially regulated industries are industries with Standard Industrial Classification (SIC) codes that have been identified by EPA as placing the industry in one of the 34 industrial categories which categorical pretreatment standards may be promulgated for. These industrial categories are presented in Appendix A of the General Pretreatment Regulations.

FIGURE 1

PROCESS FOR DEVELOPING A MAILING LIST

industries with average daily water use greater than 10,000 gallons, and all electroplating industries that were not included from the above criteria. The resulting mailing list contained approximately 1000 industries.

Mailing labels for the survey were prepared in late January to mail out the questionnaire packages. The packages contained a letter of introduction, instructions for completing the questionnaire, a questionnaire, and a return envelope. All questionnaire packages for the basic Indianapolis survey were mailed out on February 1, 1982, as scheduled.

The mailings in the Beech Grove, Lawrence, and Greenwood areas were conducted by each entity and required coordinating meetings prior to mailing out the questionnaire packages. These meetings delayed the supplemental mailing by approximately one month.

As part of the February 1 mailing, notice was given of an information workshop that would be given the following week to assist industries in completing their questionnaires. This meeting was well attended and contributed to the success of the survey.

The response deadline for the February 1 mailing was set for April 1, 1982. This gave industries ample opportunity to complete the questionnaire prior to follow-up efforts.

1.6 and 1.7: SURVEY FOLLOW-UP

In conducting the survey, two types of follow-up were required. First, inadequately completed questionnaires required further contact with particular industries to clarify information. Second, non-respondents required telephone reminders to complete the questionnaire. Both of these efforts were conducted by DPW staff under the direction of Peat Marwick and Mark Battle.

Each questionnaire received was reviewed for content and an SIC code(s) was assigned to the industry based on the products listed on their questionnaire. Incomplete questionnaires were returned to DPW Industrial Surveillance staff with the deficiencies noted. The staff then made their best attempt to correct the deficiencies through telephone contact and site visits when necessary. The site visits were particularly useful to the staff in developing a better sense of the industries in Indianapolis that are not operating with a discharge permit.

In late April all non-respondents were called to elicit a response to the survey. This technique proved to be effective and in many instances resulted in forwarding a second questionnaire to the industry to obtain a response. Less cooperative industries were contacted a second time.

1.8: DATA STORAGE

Adequately completed questionnaires are stored alphabetically in filing boxes. The questionnaire information was used to update the computer files that were developed for the mailing list. The information in the computer includes general company information, wastewater flow information, and wastewater quality information. The general company information is the main concern of this Task 1 report. The wastewater information is utilized directly in developing a wastewater characterization in Task 3.

The industrial data base is an interim system for managing data during the pretreatment study. It is not the ultimate data management system for the Industrial Surveillance Branch. A conceptual design of the ultimate data management system is being developed under Subtask 1.11. The industrial data base will provide basic information for that ultimate system.

The current data base can be sorted, evaluated, and summarized by any of the information pieces in the data base. For example, all industries that fall within one particular SIC code could be found rapidly. (See discussion in the Task 2 Report.)

1.9: DRAFT FINAL SURVEY LIST

Based on the responses to the questionnaire, draft final lists of the industries surveyed have been developed. Three types of lists are presented in the appendices.

- Appendix B presents a summary listing of all the industries surveyed that are connected to the Indianapolis sewer system including: name; location; line of business; EPA industrial category; and whether a process discharge exists;
- Appendix C presents a summary of industries that are connected to a septic tank or have gone out of business; and

- Appendix D presents a listing of the industries that are classified as belonging to specific EPA industrial categories, by each of the 34 categories. These listings include: company name, SIC codes, amount of process and total discharge, and whether the industry is currently under permit.

1.10: FINAL SURVEY LIST

Based on the City's review comments, a final survey list will be developed.

1.11: CONCEPTUAL DESIGN OF THIS DATA MANAGEMENT SYSTEM

As noted above, the study team is developing a conceptual design of a data management system for the pretreatment program. The Task 1.11 Report will be included in the pretreatment program master plan which will be submitted on October 1, 1982.

III. FINDINGS

The industrial survey was conducted on 1006 Indianapolis industries and 37 industries in the Beech Grove, Lawrence, and Greenwood areas, which also utilize the Indianapolis sewerage system. Appendix B presents a master list of these industries for each of the political entities.

The response to the survey was very high with a 93 percent return rate. The responses are summarized in Figure 2 for the basic Indianapolis survey. Of 1006 surveyed industries; 72 did not respond, 53 do not discharge to the Indianapolis sewerage system, and 183 have gone out of business. The remaining 698 industries responded to the survey, indicating either a process discharge or a domestic waste only discharge.

The industries that were determined to not contribute wastewater to the sewer system are listed in Appendix C under two major headings. The first listing presents industries that utilize septic tanks and the second listing identifies industries that have gone out of business. The septic tank listing may be useful to DPW in identifying potential problems with septage hauling.

The industries that were surveyed are categorized into each of the 34 waste classes (as determined by the EPA) in Appendix D. Each waste class determination for an industry is based on SIC codes and as a result of this procedure, numerous industries are categorized in more than one waste class.

Two additional waste classes are presented in Appendix D. The first one is a miscellaneous class of industries that may be regulated by categorical pretreatment standards but do not relate particularly well to any of the other 34 waste classes. The other additional waste class is a listing of the industries that would not be regulated and probably have a domestic discharge only.

An important finding, in reviewing Appendix D is the frequency that the City maintains permits with apparent major industries. A cursory analysis of the listings by waste class, indicates that the majority of major discharges are under permit. The exceptions to those findings should receive attention from the Industrial Surveillance Branch where appropriate.

Figure 3 summarizes the information presented in Appendix D.

Appendix A

Industrial Wastewater Pretreatment Questionnaire

CITY OF INDIANAPOLIS

WILLIAM H. HUDNUT, III
MAYOR

DEPARTMENT OF PUBLIC WORKS
2460 CITY-COUNTY BUILDING
INDIANAPOLIS, INDIANA 46204

DIRECTOR
RICHARD RIPPET

February 1, 1982

Dear Sirs:

As you are probably aware, the City of Indianapolis is currently developing an industrial waste pretreatment program in conjunction with the construction of two new wastewater treatment facilities in the Belmont and Southport areas of Marion County. The new publicly-owned treatment works (POTWs) will increase the level of treatment of Marion County's industrial and residential wastewater discharges to improve the local environment. The industrial waste pretreatment program is required to satisfy the Federal Clean Water Act and regulations of the Environmental Protection Agency (EPA) and the Indiana Stream Pollution Control Board.

The specific purposes of the pretreatment program are to prevent the introduction of pollutants into the POTW that would:

- Interfere with operations of the treatment facilities;
- Pass through untreated into our rivers and streams;
- Adversely affect our ability to recycle and reclaim wastewater and sludge; and
- Represent a risk to the public health and to the environment.

The first step in the development of the pretreatment program is a survey of industries in Indianapolis to obtain information on the types of wastes discharged to the city sewer system.

A questionnaire is enclosed for your response regarding wastewater discharges to the municipal sewers. Please complete the questionnaire and return it in the enclosed, stamped envelope to Dale Bertelson, Chief, Industrial Surveillance Branch by April 1, 1982.

Your facility currently discharges wastewater to the sewerage system under the City's permitting system. Selected information that is on file regarding your facility has been used to partially complete the questionnaire. Please correct any inaccurate information and complete the appropriate blanks.

February 1, 1982

Page 2

Completing this questionnaire is a requirement of the Indianapolis Sewer Use Ordinance and Industrial Discharge Permit provisions. The industries that do not complete and return this questionnaire by April 1, 1982, will be contacted by the Industrial Surveillance Branch of the Department of Public Works. You can be assured that the enclosed questionnaire has been developed to capture only the information that the City requires for an effective pretreatment program.

We would appreciate your cooperation in the completion of this survey because the program is intended to serve you, other local industries, and the citizens of Indianapolis. To assist you in completing the questionnaire, instructions are included as part of this package and a workshop will be held on February 9, 1982 at 9:30 A.M. in the City-County Building Public Assembly room to review the questionnaire in detail and address any questions that you may have. If you should require any additional assistance, please contact Mr. Dale Bertelson, Industrial Surveillance Branch Chief, at 634-2030.

Very truly yours,

Richard Rippel
Director of Public Works

Enclosure

CITY OF INDIANAPOLIS

Industrial Waste Pretreatment Questionnaire

INSTRUCTIONS

This questionnaire is to be completed by industries connected to the Indianapolis sanitary sewer system. (This system excludes storm sewers which do not discharge wastewater to sanitary sewers.) Industries that have separate facilities which discharge to the system must complete individual questionnaires for each facility. If in completing the questionnaire a particular question is not applicable to the facility or information is not available to answer the question, please indicate accordingly in the space provided.

The questionnaire consists of two sections. Section A requests general information on each facility and Section B requests specific wastewater information. The questionnaire must be signed by an official of the firm with the authority to certify the accuracy of information provided on the questionnaire.

It should be noted that industries which discharge only domestic sewage (wastewater from sanitary facilities) to the sanitary sewer system should just complete and return the first page of the questionnaire.

The following are specific instructions for answering each question in Sections A and B.

Section A

1. Use the name of your company that best describes this facility.
2. Use the most appropriate street address for this facility.
3. Identify the general mailing address for this facility.
4. Use general terms to describe the products or services being produced at your facility.
5. List the major products or services of your facility in decreasing order of gross dollar volume of sales under the "Product" heading. For each product or service listed, use the adjacent space under the "Process" heading to briefly describe its production process. (For example, if your product is metal fasteners your process might be metal forming, galvanizing and rinsing).
6. Enter the total number of employees currently working at your facility. Count a full-time employee as one (1) and a half-time employee as 1/2.
7. Indicate normal operating conditions to describe your operating schedule.
8. Identify routine shutdown periods that last one week or more.

INSTRUCTIONS (continued)

9. Describe the change in your operations during the year, if such a change occurs, and its affect on your wastewater discharge.
10. Describe other operating conditions, besides those identified in Question 9, that affect your wastewater discharge.

Section B

1. In the right-hand column under the heading "Average Gallons per Day," enter the appropriate water information and total your responses.

To calculate average gallons per day, estimate the total flow this past year in gallons and divide by 365. (For conversion purposes, 1 cubic foot equals 7.5 gallons.)

2. Using the same process as in question 1, calculate the volume of water discharged to the sanitary sewers and estimate the percentage of flow to the sewer according to the categories provided. Also indicate the volume of water discharged to storm sewers, lost through evaporation, hauled offsite, contained in the product, or other category.
3. Self-explanatory.
4. Use the space provided to describe your outlets (connections) to sanitary sewers, including a general description of the major source(s) of flow. If any of this information is not known, provide your best estimate. Facilities with numerous outlets should discuss their response with Dale Bertelson. (Please note that pH is reported from 1 to 14, with 1 representing extreme acid conditions, 7 representing neutral conditions, and 14 representing extreme basic conditions.)
5. Support your response to Question 4 with a drawing of your facility showing the outlets (connections) identified and sampling and flow monitoring locations.
6. Describe any steps that your facility takes to treat wastewater prior to discharge to the sanitary sewer system and how to dispose of any residuals.
7. An SPCC plan establishes emergency procedures for the control of oil or hazardous materials.
8. Complete this question (pages 5, 6 & 7) for each outlet identified in Question 4 that discharges process wastewater to the sanitary sewer system. This section is to be completed without any additional analysis of your wastewater.

If you have any problems in completing the questionnaire, contact Mr. Dale Bertelson at 634-2030 or plan on attending the questionnaire workshop on February 9. Your completed questionnaire must be sent by April 1, 1982 to the following address:

Mr. Dale Bertelson, Chief
Industrial Surveillance Branch
Department of Public Works
2700 S. Belmont Avenue
Indianapolis, Indiana 46221

8.	_____	_____	_____	_____

5. Attach a drawing of your facility indicating the location of all outlets listed in question B-4. Include the location and a brief description of any existing sampling and/or flow monitoring activities and any other locations where sampling and/or flow monitoring can be accomplished.
6. Describe any pretreatment of wastewater streams that occurs prior to discharge to the sewerage system and the final disposal of residuals. (For example, neutralization, chemical addition, filtration, oil separation, grease trap, sedimentation, or biological treatment.)
- _____
- _____
- _____
- _____
- _____
- _____
- _____
- _____

7. Does your facility have a spill prevention control and countermeasure (SPCC) plan? Yes No

8. a. Characterize the wastewater for *each* outlet to the sewerage system (identified in question B-4) by checking the pollutants that you believe to be present in your wastewater on a regular or intermittent basis. This question should be completed with existing data only, new analysis of your wastewater is not required at this time. If your facility has multiple outlets, copy pages 5, 6 and 7 and complete them for *each* outlet.

Note: This section should be completed only if process wastewater is discharged to the sewerage system.

Outlet number (ref. B-4): _____

90.	*dieldrin	<input type="checkbox"/>	129.	**2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD)	<input type="checkbox"/>
91.	*chlordane (technical mixture & metabolites)	<input type="checkbox"/>			
	*DDT and metabolites			*Specific compounds and chemical classes as listed in the 1976 EPA consent decree.	
2.	4,4'-DDT	<input type="checkbox"/>		**This compound was specifically listed in the consent decree. Because of the extreme toxicity (TCDD), EPA recommends that laboratories <i>not</i> acquire analytical standard for this compound.	

8. b. List in the "Chemical Compound" column all materials identified in part a of this question as "believed present" plus any other materials in your waste stream that may be harmful to the municipal sewerage system. For all of these materials and the pollutants already listed below, estimate *either* the pounds discharged per year or the average concentration in milligrams per liter (mg/l) of the material in the waste stream.

Chemical Compound	Quantity discharged in <i>either</i> :	
	lbs/yr	mg/l
BOD ₅		
Chemical Oxygen Demand		
Total Organic Carbon		
Total Suspended Solids		
Ammonia (N)		
Total Kjeldahl Nitrogen		
Petroleum Oils & Grease

Indianapolis, Indiana 46204

Dear Dr. Keramida:

As requested, we have prepared an additional appendix to the July 1, 1982, draft Task 1 Report. The enclosed appendix will be Appendix E in the final Task 1 Report. The appendix presents industrial discharge data from the survey for submittal to the State and EPA.

The enclosed table presents an alphabetic listing of industries with process wastewater discharges. For each industry listed, the following information is provided:

- Industry Name;
- Industry Number;
- Line of Business;
- SIC Code(s);
- Average Flow; and
- Concentration of Pollutants Discharged.

The final two pages of this appendix provide additional listings of pollutant discharges for less common priority pollutants.

We look forward to reviewing this supplemental appendix with you on November 16.

Very truly yours,

PEAT, MARWICK, MITCHELL & CO.

Larry Scully
Larry J. Scully, Sr. Manager
